

# 18A.IndexOfRefraction

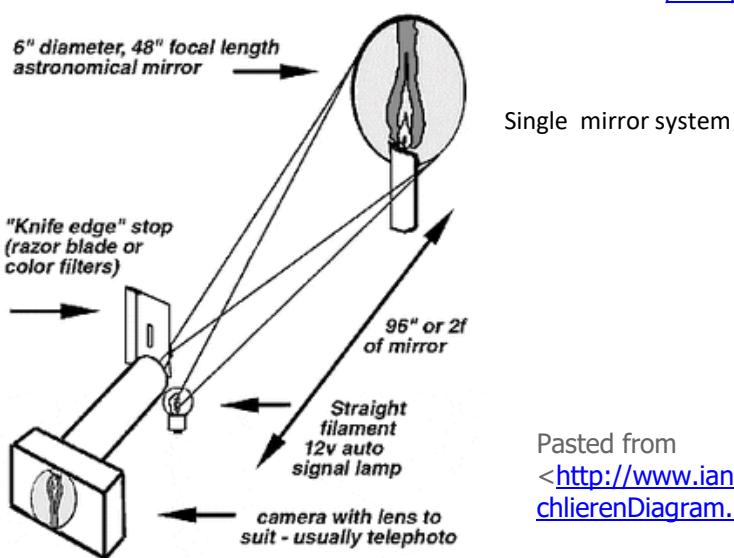

2

Monday, November 14, 2016 7:50 AM  
Today: Finish Refractive Index Methods,  
Then back to dyes; Light Emitting Fluids

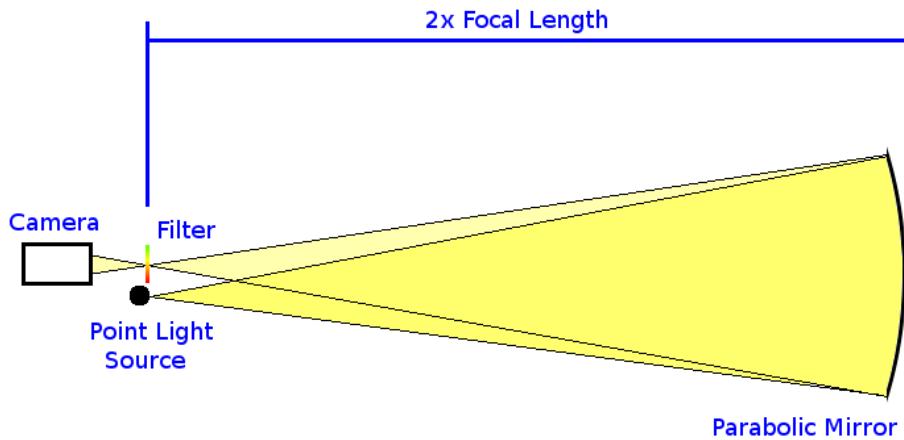

Z fold with mirrors; saves space, cost. Want space between mirrors to be  $3 \times f$   
Either spherical or parabolic mirrors work.

### BOS = Background Oriented Schlieren

Uses patterned background instead of mirror, any random lighting. View of background will be distorted by  $\nabla$  field. Take two images and do cross correlation, like PIV.

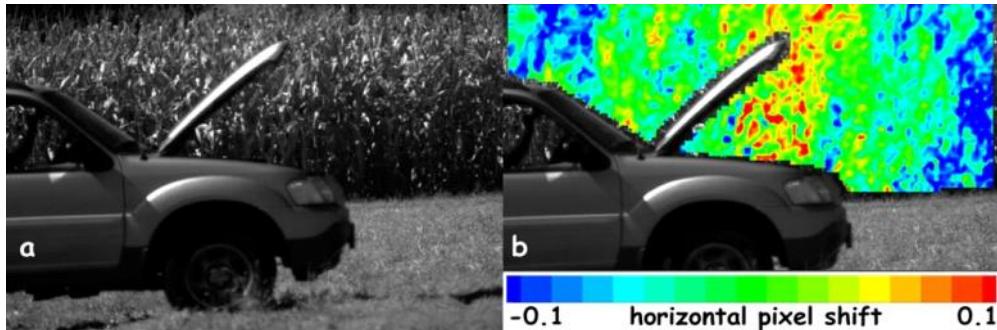

<http://www.dlr.de/as/en/desktop/default.aspx/tabid-183/251/read-2726/>

<http://www.mne.psu.edu/psgdl/Res-Optical.html>

The thermal plume generated from a hot truck engine is visualized against a background of corn. The (a) original image is compared to one recorded 7 ms later to determine the (b) horizontal pixel shift. The contour plot of horizontal pixel shift in a BOS image is optically equivalent to a vertical knife-edge cutoff in traditional schlieren.

## Focusing schlieren

<http://people.rit.edu/andpph/text-schlieren-focus.html>

<https://www.youtube.com/watch?v=DYx2xLLrUyg> ice cube in a fishtank, by Spectabit:

<http://www.spectabit.com/index.php/product-types>

Now, an even simpler method, using an encoded light field:

**Light Field Back-  
ground Oriented Schlieren Photography (LFBOS)**

Klemkowsky, Jenna N., Timothy W. Fahringer, Christopher J. Clifford, Brett F. Bathel, and Brian S. Thurow. "Plenoptic Background Oriented Schlieren Imaging." *Measurement Science and Technology* 28, no. 9 (2017): 095404. <https://doi.org/10.1088/1361-6501/aa7f3d>.  
In Zotero library.

We have two sets of 4" diameter mirrors; would love to see 3D stereoscopic schlieren.
