

Science: What is science? What makes an image 'scientific'?

Image is scientific if

- you can see the context
- It is explainable
- scale is included in the image, allowing it to be quantified
- it can be repeated, for the same results. This allows others to check; provides a measure of objectivity. Not just one person's opinion

Understanding of why
Investigation of natural world
Testing of hypotheses

↳ Observation

Everything can be explained by science

Image by itself is not scientific

Science can be used to predict
cause & effect

ART?

Art must be useless - Oscar Wilde
Pleasing to the eye
Sticker price

Art is only created by humans
Art is in the eye of the beholder

"Art is the execution of a vision" - JH
